

## TEMPLATING GUIDE

You will need: Isoteak film, scissors, a knife, a marker, a roll of adhesive tape and a digital camera.

### How to make a template:

1. Lay down the film so that "Top Side" is on top and it cover the entire surface where the deck covering should be.

If there are surfaces that are larger than the width of the film, use multiple sheets, overlapping the edge of one sheet over the edge of the other with a margin at least one centimeter. Use adhesive tape to fix a template.

2. Draw the template with a permanent marker.
